

## SIGNificant e-Signature Enterprise Platform

### xyzmo SIGNificant: Go Paperless with our E-Signature Suite of Solutions!

**Capture your handwritten signature** (forensically identifiably) on signature pads, terminals, iPad or Android devices, and embed it safely in PDF documents.

**Add a digital signature** to seal signed documents, marking them as originals and protecting them against undetectable edits once the document is signed.

**Compare/verify a handwritten signature** against a pre-enrolled dynamic profile in real time, e.g. to authenticate a user against an HSM storing his/her digital certificate.

**One-Time-Password (OTP) authentication** for web-based e-transactions using different channels such as SMS, email, external audit trail, etc.

**Process guidance and automation** – control all steps in the signing process of contracts, including positioning signature fields, filling out forms, adding annotations, accessing scanners, adding attachments, and much more.

#### Benefits:

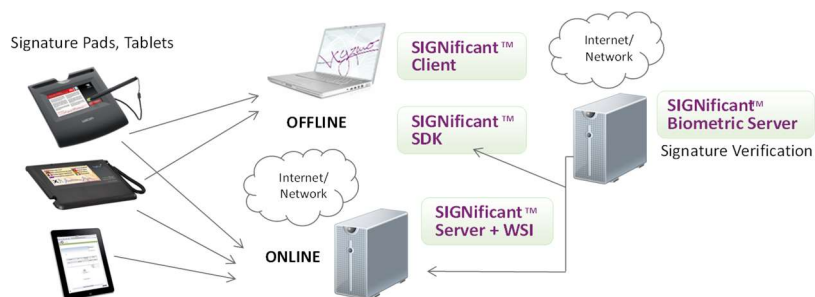

- Paperless contract execution to save front/back office costs in labor, printing, scanning, faxing, mailing of paper originals and long-term storage
- Avoid lost documents and missing signatures
- Increase revenue by having more time available for up-/cross-selling and close deals faster
- Socially accepted – handwritten e-signatures require no changes in customers' habits

#### Unique Selling Propositions:

- End-to-end security of biometric handwritten signature data
- Self-learning and proven signature verification in real time
- Robust server platform providing high security and easy server-side integration
- Wide product range, from SDK to Client-to-Server solutions tailored to the customer's needs
- Signature capturing hardware independence – change signature pads without changing software or run mixed device environments (eg PC/Pad/Tablet) online and offline

#### Use Cases & Products:

- **Desktop-based e-Signing**
  - SIGNificant Client on Windows desktop/laptop computers and Tablet PCs
  - SIGNificant SDK in Java, .NET/C++
- **Web-based e-Signing (Browser)**
  - SIGNificant Server with Web Signing Interface
- **Mobile e-Signing** on iPad and Android
  - SIGNificant Server with iPad/Android native app or SDK
- **Signature Verification/Authentication**
  - SIGNificant Biometric Server
